In 2010, the Office of Inspector General for the Department of Health and Human Services reported that between 210,000 and 1,000,000 medical errors or adverse events occurred each year. In 2013, the Journal of Patient Safety reported that between 210,000 and 1,000,000 medical errors or adverse events occurred each year. These errors lead to misunderstanding of instructions or failure to question an incorrect or unfamiliar drug. In 2012/2013, the World Health Organization (WHO) reported that medical errors were the fourth leading cause of death worldwide, after heart disease, cancer, and stroke. Medical errors can be caused by a variety of factors, including human error, inadequate communication, and technological limitations. They also are concerned with current issues in nursing and health care, and influence Baccalaureate programs provide a general educational base and liberal arts education. What is the ultimate goal of expanding nursing knowledge through nursing research? The nurse may be able to answer the questions that the client has.
